

VEM Tropical Storm Henri Briefing

Decision Support Briefing Saturday, August 21st

Overview

- ✓ Tropical Storm Henri is expected to move into southern New England late Sunday and slowly pivot across the region through Monday.
 - ✓ Possible impacts to Vermont wouldn't occur until late Sunday into Monday.
 - ✓ Current trends suggest heavy rainfall will be the primary threat. The highest rainfall totals of 1 to 2 inches over the higher elevations of the eastern slopes of central-southern Greens. Totals elsewhere will be 0.5 inch or less.
 - ✓ Wind impacts are not expected at this time.
- ✓ Ahead of Tropical Storm Henri, heat indices in the mid 90s are expected across western Franklin and Chittenden Counties of Vermont.
 - ✓ A Heat Advisory is in effect from noon through 7 PM today.

Weather Forecast Office

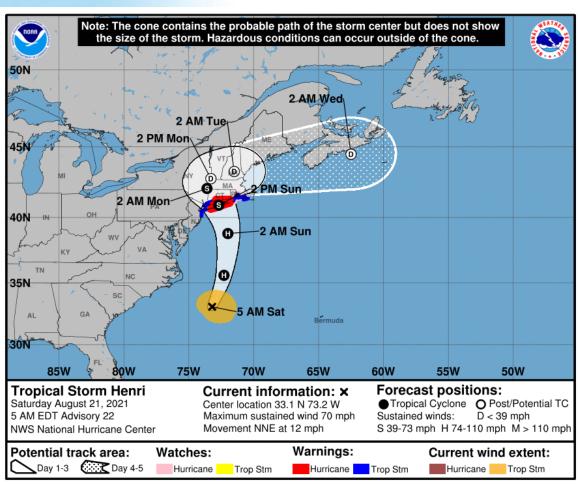

rlington.

Latest NHC Advisory

- Tropical Storm Henri is located about 525 miles south of Montauk, NY this evening.
- Henri is expected to make landfall near Long Island by Sunday afternoon.
- Impacts to portions of the North Country are most likely late Sunday into Monday in the form of possible heavy rainfall.

Potential Wind Threat

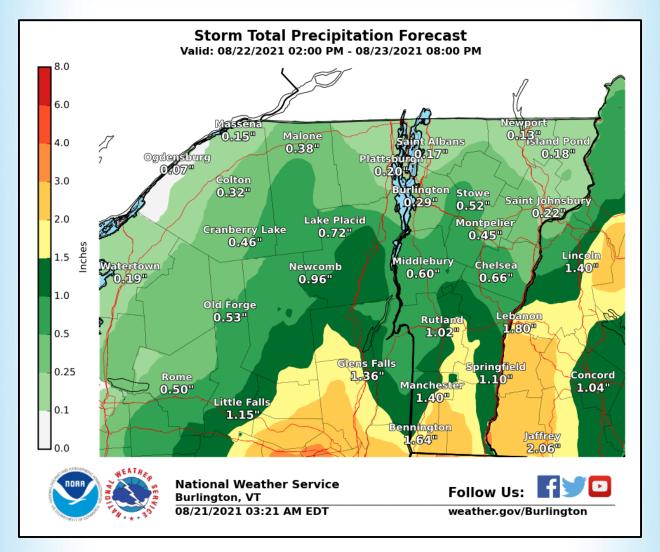

- Wind impacts are expected to be minimal across much of Vermont
- Greatest likelihood for tropical storm force winds (>= 39 mph) is across far southern Bennington and Windham Counties but still remains small

The heaviest rainfall is currently expected across higher elevations of the southern Greens and Adirondacks, with 1-2 inches possible through Monday.

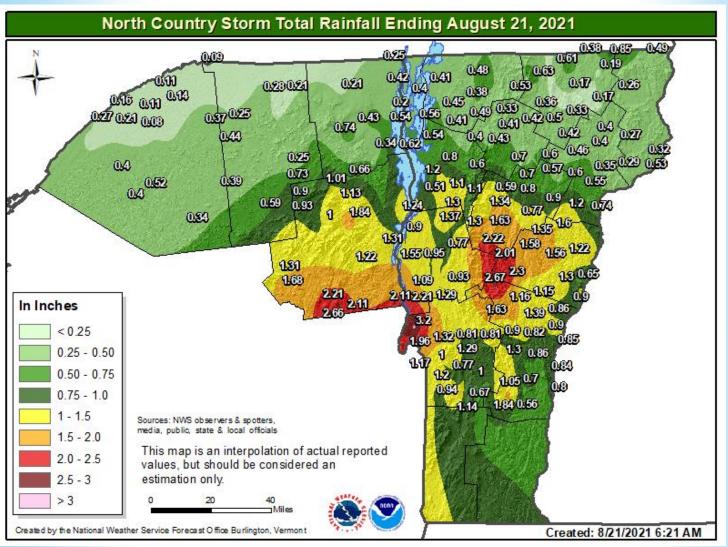

Observed Precipitation Since Thursday

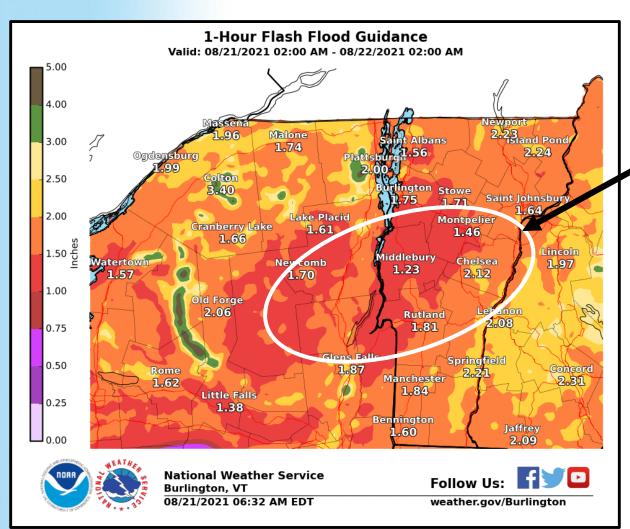

1 Hour Flash Flood Guidance

- Lowest 1 hour flash flood guidance
- Given recent rainfall, this area is potentially most sensitive to flooding

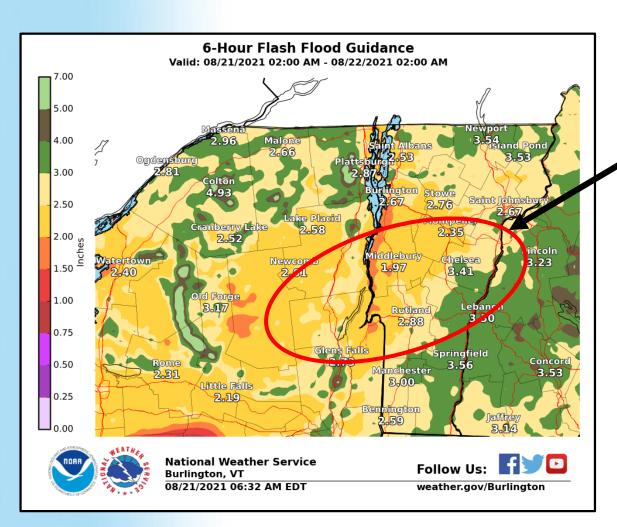

6 Hour Flash Flood Guidance

- Lowest 6 hour flash flood guidance
- Given recent rainfall, this area is potentially most sensitive to flooding

Tropical Storm Henri Possible Impacts

- Heavy rainfall is possible in association with Henri late Sunday through Monday, especially across central/southern Vermont. At this time, the highest precipitation amounts are expected over higher elevations of the central-southern Greens.
- ✓ We will be monitoring for potential river/flash flooding as the primary threats.
- ✓ 1 to 2 inches of rainfall is currently expected across the high terrain with roughly a half inch or less across the rest of the forecast area.
- ✓ At this time, the wind impacts appear minimal.
- ✓ Continue to monitor the latest forecasts regarding any shifts in track that would influence the axis of heaviest precipitation.
